

SQL MI Developer

Department: MI Team

Location: Stratford

Type: Permanent

Weekly Hours: 39.5 Hours

Closing Date: 31/01/2012

We are looking for a SQL MI Developer to join our busy MI Development team. Reporting to the Development Manager, the ideal client will be responsible for creating new KPI reports using the 2008 SQL Server suite. The unified reporting strategy in SQL Server is a recent development, so experience of migrating and redesigning existing reports from legacy systems such as Microsoft Access will also be a key requirement as we continue to develop the reporting tools for the business using SQL Server and SSRS.

The successful candidate will be able to manage and develop various reports for stakeholders from inception to release. The strategy is to develop reports and automate where possible using stored procedures to populate reports. Users can then run reports using filters and drilldowns in the reports themselves. The current drive is towards dashboard reporting, so experience of designing reports in this style would be extremely advantageous.

Key Skills:

2005/2008 T-SQL SQL Server Management Studio to create and design tables, queries and views to drive reports

2005/2008 SSRS to create front-end reports

2005/2008 SSPS to create and manage store procedures

Microsoft Access/VBA/Excel to migrate and cleanse legacy reports

Desirable:

Exposure to PRINCE2 or similar project development methodology

Experience of KCS K8.09 ERP System

Experience:

2 or more years of working in a Management Intelligence, Business Intelligence role or similar

Proven experience of producing KPI reports using SSRS is essential. The successful candidate will be able to provide screenshots of previous work in this area.

Experience of developing cockpit/dashboard-style reporting suites

Experience of gathering requirements from a variety of stakeholders across the business
